

## BI Dashboard

The WBG is implementing data virtualization that integrates data from disparate sources, locations, and formats, without replicating the data, to create a single virtual data layer. This virtual layer delivers unified data services to support multiple applications and users, resulting in access to data with less replication and consolidation and more agility to change.

While the data owners may well understand the definitions, key attributes, and matrices surrounding the data they own, other business users and units do not have access to a consolidated catalog that informs them about the meaning of the data, the business rules and controls surrounding the data, the source of data, and the relevant metadata.

The Data Catalog Home Page lists a summary of your requests and entry point to the Data Catalog and selection to Request a Data or Web Services.

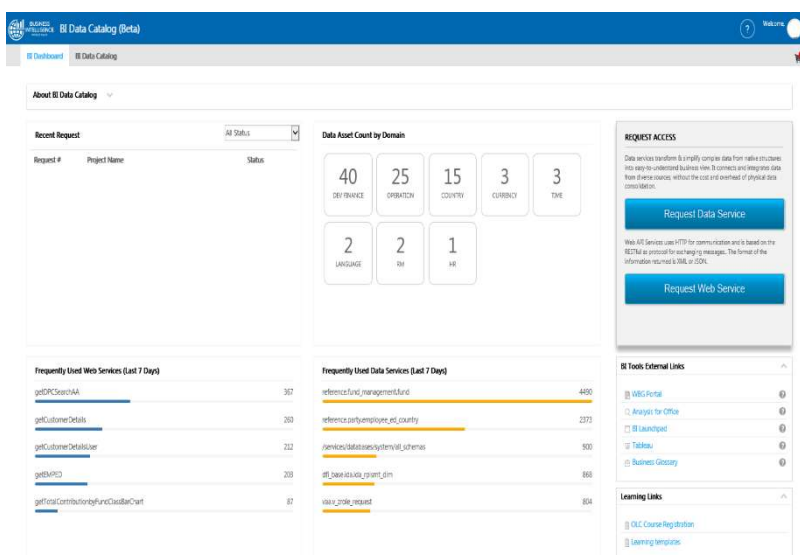

The domains and count of objects available and statistics of the top 7 frequently used Data and Web services.

### Request Data or Web Services

Select: Request Data Service or Request Web Service

Select from drop down lists to specify desired asset:

#### DATA SERVICE:

Database / Catalog / Schema / Objects

#### WEB SERVICE:

Web Service Path / Service Name / Operation

Select “Add to Cart”

Count in upper right hand corner

Add as many item to cart as required. Items in the Request Basket can be reviewed by clicking on the cart.

## Request Basket

Items in your basket are listed on left.

These can be removed using trash can.

Right side of form is filled out filling all \* items.

Items with additional Policy Questions based on clearance rules will be highlighted in **RED**.

## Policy Questions

Policy Q&A should be filled out as completely as possible to reduce follow up questions.

Click Submit and Policy Question icon will turn **green**.

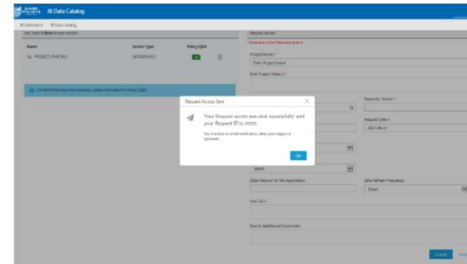

This basket item is now ready for submission.

## Submitting Request

Once all basket times required Policy Q&A are Green, fill out the Request Access required items with \*.

Fill out the optional items as completely as possible to provide a clear case for the request.

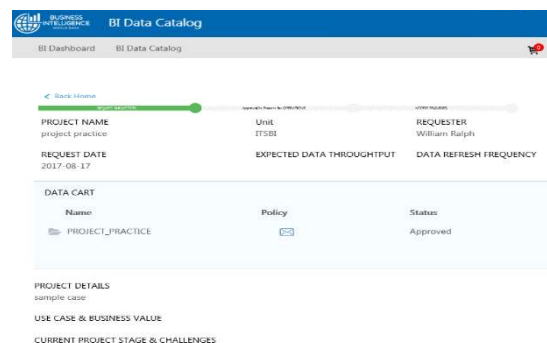

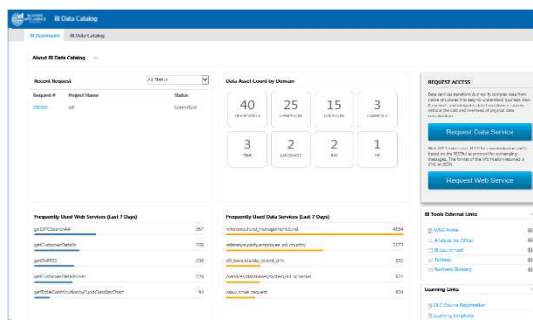

Click **Submit** – a Request Id is returned.

## Request Confirmation and Approval

Returning to the BI Dashboard will now display your recent requests and their status.

Submitted Request can be reviewed including the Policy Q&A details but cannot be changed

An email confirmation will be sent to the requestor and to data steward responsible for the data asset.

Upon approval, a confirmation email will be sent to the requestor.
